Application for ETAs on Evolution Anchorbolts

Evolution have recently announced that they have applied for a European Technical Approval (ETA) on their full range of Anchorbolts.

It is expected the approval will be achieved in the latter part of 2011.

An ETA for a construction product signifies that a technical assessment of the product's suitability for an intended use has been carried out. An ETA gives users of a product peace of mind and is a reflection of the product's superior quality and performance.

For more information on these approvals or Evolution anchorbolts, please contact their Technical Department:
